### MICYLOU WIKI

This WIKI is the perfect example of a mix between internal and public information. We indeed use this WIKI internally for our subscription based information, our own documentation with, of course, access restriction and some public information we provide to everybody.

This is achieved by using Mediawiki as core engine (Mediawiki is the engine running Wikipedia) and carefully selecting and configuring extensions and additional components to build our solutions.

With our security matrix in place, we can mix internal restricted, sunscriptoin restricted and public information at ease while also providing role-based access to the solution.

You'll come across pages constructing dynamically and instantly on screen a document based on a multitude of sources, or documents with pdf embedded into the page. Other pages will offer only part of their content because of access restriction, this to show you what you can expect from such a solution.

PHP based, running for us on Linux servers, this solution is fully open source and free. We have decided to use only freely available components. Compared to a share point, the required infrastructure is way lighter; as a test, we successfully ran it on a ARM based tablet... Try to do this with Sharepoint...

| | |
|---|---|
| Knowledge Management | Generic presentation of Knowledge Management |
| Our Knowledge Management Solution based on MEDIAWIKI | Explore the power of a Semantic powered Knowledge Management Platform.<br>We can build your wiki according to your need and should you require it do the hosting on dedicated VPS machines running Linux (Ubuntu). Each of our solution uses security certificates and HTTPS forced.<br>All our wikis include their own documentation. |
| ITIL Training | We provide exam question quizzes to train you for your ITIL V4 Foundation exams, 2 sets of 15 question for free, the others (240 questions in 16 quizzes of 15 questions each) with a subscription. |

| | |
|---|---|
| Documentation | We can gather information about your processes, ... and create the documentation in various formats, including on or embeded in a WIKI with a detailed access security matrix meeting your confidentiality requirements. See our User Guide, Microsoft, D365 or Linux pages as samples. |
| Interim management | We can help you in may domains like Operations, Billing, Customer Service and Support, IT, Project (Portfolio) Management and PMO, of course knowledge management, and others ...<br>All documentatino of our work can be documented in a state-of-the-art wiki. |
