Description

The PDFEmbed extension allows PDF files (uploaded to your wiki) to be embedded into a wiki page using <pdf></pdf> tags. The PDF file extension is automatically added and necessarily default permissions are configured. Future functionality will allow this extension to act as a media handler for PDF files.

Installation

Download

Download and place the file(s) in a directory called PDFEmbed in your extensions/ folder.

Activation

Add the following code at the bottom of your LocalSettings.php:

```
wfLoadExtension( 'PDFEmbed' );
```

Configuration

If the default configuration needs to be altered add these settings to the "LocalSettings.php" file below the require:

```
// Default width for the PDF object container.
$wgPdfEmbed['width'] = 800;

// Default height for the PDF object container.
$wgPdfEmbed['height'] = 1090;
```

Usage

The PDF to be embedded must first be uploaded to the wiki through "Special:Upload". The namespace prefixed file name is then used between the tags to embed it in a page.

```
<pdf>File:Example.pdf</pdf>
```

With optional width and height.

```
<pdf width="500" height="300">File:Example.pdf</pdf>
```

Scroll to page 10 after document is rendered.

```
<pdf page="10">File:Example.pdf</pdf>
```
