## MICYLOU WIKI

This WIKI is the perfect example of a mix between internal and public information. We indeed use this WIKI internally for our subscription based information, our own documentation with, of course, access restriction and some public information we provide to everybody.

This is achieved by using Mediawiki as core engine (Mediawiki is the engine running Wikipedia) and carefully selecting and configuring extensions and additional components to build our solutions.

With our security matrix in place, we can mix internal restricted, sunscriptoin restricted and public information at ease while also providing role-based access to the solution.

You'll come across pages constructing dynamically and instantly on screen a document based on a multitude of sources, or documents with pdf embedded into the page. Other pages will offer only part of their content because of access restriction, this to show you what you can expect from such a solution.

PHP based, running for us on Linux servers, this solution is fully open source and free. We have decided to use only freely available components. Compared to a share point, the required infrastructure is way lighter; as a test, we successfully ran it on a ARM based tablet... Try to do this with Sharepoint...

Knowledge  
Management

Generic presentation of Knowledge Management

[Our Knowledge  
Management Solution  
based on MEDIAWIKI](#)

[Explore the power of a Semantic powered Knowledge Management Platform.](#)

We can build your wiki according to your need and should you require it do the hosting on dedicated VPS machines running Linux (Ubuntu). Each of our solution uses security certificates and HTTPS forced.  
All our wikis include their own documentation.

[ITIL](#) Training

We provide exam question [quizzes](#) to train you for your [ITIL](#) V4 Foundation exams, 2 sets of 15 question for free, the others (240 questions in 16 quizzes of 15 questions each) with a subscription.

## Documentation

We can gather information about your processes, ... and create the documentation in various formats, including on or embedded in a WIKI with a detailed [access security matrix](#) meeting your confidentiality requirements. See our [User Guide](#), [Microsoft](#), [D365](#) or [Linux](#) pages as samples.

## Interim management

We can help you in many domains like Operations, Billing, Customer Service and Support, IT, Project (Portfolio) Management and PMO, of course knowledge management, and others ...

All documentation of our work can be documented in a state-of-the-art wiki.
