Description

The UserMerge extension allows wiki users with the usermerge permission (Bureaucrat by default) to merge one Wiki user's account with another Wiki user's account.

The extension allows to :

- merge (refer contributions, texts, watchlists, edit count of a first account A to a second account B)
- delete the first account A after the merge (option box)

Limitations

- you cannot delete a user A without having merged the user A to B
- you cannot merge your own account (logged-in user) into a different user

Extras

- if you omit the "New User" field, then the extension auto-populates the New User as

"Anonymous" (user_id 0), and ask you to confirm a merge to Anonymous. This is used for user deletion: you first empty (merge to user 0) contributions of a user A, and then delete the user A.

- If your version of the extension complains about an empty "New User" field you can fill in "Anonymous"
- the extension creates a User Merge log and logs all User Merge extension activity.[1]

Installation

Download and place the file(s) in a directory called UserMerge in your extensions/ folder.

Download

[Download](#) and place the file(s) in a directory called UserMerge in your extensions/ folder.

Activation

Add the following code at the bottom of your LocalSettings.php:

```
wfLoadExtension( 'UserMerge' );
```

Configuration

```
// By default nobody can use this function, enable for bureaucrat?  
$wgGroupPermissions['bureaucrat']['usermerge'] = true;  
// optional: default is array( 'sysop' )  
$wgUserMergeProtectedGroups = array( 'groupname' );
```
